本科目試題共二頁 第一頁

Part I Discrete Mathematics

A. Fill the blanks from ① to ⑨. (4 points each)

1. Assume that an automatic recognizer is used to distinguish boys from a group of people which consists of 10 boys and 8 girls. There are 12 persons recognized as boys by the recognizer. However, only 9 out of these 12 persons are actually boys, other 3 persons are girls. With these statistics, the precision and accuracy of this recognizer are ① and ② respectively. $\frac{9}{12}, \frac{12}{20}$
2. In the equation of $y_1 + y_2 + 5y_3 = 12$, there are 7 solutions of positive integers (that is, y_1, y_2 , and y_3 are all positives) and ③ non-negative integers. 24
3. Translate the following 2 statements using logical symbols, such as \forall and \exists , propositional variables, and logical operators. The logical expression for "There is no maximum integer" is ④ and the logical expression of "Every integer has a unique additive inverse" is ⑤. $\forall x \exists y. x < y$, $\forall x \exists y [x+y=0 \wedge \forall z (z \neq y \rightarrow x+z \neq 0)]$
4. The recurrence relation of the number of moves required for Hanoi tower is $a_k =$ ⑥, where $a_1 = 1, a_2 = 3$. $2a_{k-1} + 1$
5. Assume that there are 1 red ball and 2 blue balls in box 1, and 2 red balls and 3 blue balls in box 2. You choose one ball randomly. If you have selected a red ball, then the probability that you selected a ball from the 1st box is ⑦. $\frac{5}{11}$
6. The number of bit strings of length 10 having more 0s than 1s is ⑧, and the number of bit strings of length 10 having at least 3 1s is ⑨. $512, 1023$

B. True or false (2 pts each for a correct answer and -1 point for a wrong answer)

1. Incidence matrix, for graph representation, is a symmetric matrix. ~~F~~
2. The cardinality of Q is the same as the cardinality of Z . ~~T~~
3. Among 100 people there are at least 9 who were born in the same month. ~~T~~
4. $(P(S), \subseteq)$ is a partially ordered set, where $P(S)$ is a power set of $S = \{1, 2, 4\}$. ~~T~~
5. " $\neg p \rightarrow q$ " is logically equivalent to " $\neg(q \leftrightarrow p)$ ", where \neg stands for "not". ~~F~~
6. There are 81 ways to put 4 distinguishable balls into 3 different boxes. ~~T~~
7. Traveling salesman problem is the problem to find an Euler circuit of least cost. ~~F~~

d $B' = \{v_1, v_2, v_3\}$, wh

$$b) \begin{bmatrix} 0 & 0 \\ -\frac{1}{2} & 1 \\ \frac{8}{3} & \frac{4}{3} \end{bmatrix}$$

本科目試題共二頁 第二頁

Part II Linear Algebra

1. Determine whether the set S is linear independent or dependent. (3% each)(a) $S = \{(2, -1, 4), (3, 6, 2), (2, 10, -4)\}$ in R^3 . independent ✓(b) $S = \{(2, 1, 1), (2, -1, 3), (2, 3, -1)\}$ in R^3 dependent ✓(c) $S = \{0, x, x^2\}$ in polynomial space P_2 . independent x, 因有 0(d) $S = \{3 + x + x^2, 2 - x + 5x^2, 4 - x^2\}$ in polynomial space P_2 . independent ✓(e) $S = \{(1 + x)^2, x^2 + 2x, 3\}$ in polynomial space P_2 . dependent ✓
 $x^2, 2x, 1$ 2. Let matrix $A = \begin{bmatrix} 3 & -2 & 0 \\ -2 & 3 & 0 \\ 0 & 0 & 5 \end{bmatrix}$ (a) Find A^{-1} . (5%)

$$\begin{bmatrix} 0.6 & 0.4 & 0 \\ 0.4 & 0.6 & 0 \\ 0 & 0 & 0.2 \end{bmatrix}$$

(b) Verify whether A is positive definite. (5%)

$$\lambda = 5, 5, 1$$

故正定 ✓

(c) Find a matrix P such that $P^{-1}AP$ is diagonal. (10%) $A = PDP^{-1} = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 5 & 0 \\ 0 & 0 & 5 \end{bmatrix} P^{-1}$ 3. Let $T : R^2 \rightarrow R^3$ be defined by

$$T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} x_1 + 2x_2 \\ -x_1 \\ 0 \end{bmatrix}$$

(a) Find the matrix of T with respect to the bases $B = \{u_1, u_2\}$ and $B' = \{v_1, v_2, v_3\}$, where

$$u_1 = \begin{bmatrix} 1 \\ 3 \end{bmatrix} \quad u_2 = \begin{bmatrix} -2 \\ 4 \end{bmatrix} \quad v_1 = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} \quad v_2 = \begin{bmatrix} 2 \\ 2 \\ 0 \end{bmatrix} \quad v_3 = \begin{bmatrix} 3 \\ 0 \\ 0 \end{bmatrix}. \quad (10\%)$$

(b) Use the matrix obtained in (a) to compute $T\left(\begin{bmatrix} 4 \\ 6 \end{bmatrix}\right)$. (5%)

$$\begin{bmatrix} 4 \\ 6 \end{bmatrix} = \alpha \begin{bmatrix} 1 \\ 3 \end{bmatrix} + \beta \begin{bmatrix} -2 \\ 4 \end{bmatrix} \quad \alpha = \frac{14}{5} \quad \beta = \frac{-3}{5}$$
$$\begin{bmatrix} 0 & 0 \\ -1/2 & 1 \\ 8/3 & 4/3 \end{bmatrix} \begin{bmatrix} 14/5 \\ -3/5 \end{bmatrix} = \begin{bmatrix} 0 \\ -2 \\ 20/3 \end{bmatrix} = \begin{bmatrix} 4 \\ 4 \\ 0 \end{bmatrix} + \begin{bmatrix} 20 \\ 0 \\ 0 \end{bmatrix}$$

$$T\begin{bmatrix} 4 \\ 6 \end{bmatrix} = \begin{bmatrix} 16 \\ -4 \\ 0 \end{bmatrix}$$
